

# Wiring The World

Dave (and Alethea) Price

Computer Science

Aberystwyth University

(Updated 22<sup>nd</sup> February 2016)

# Overview

- History of the World Telephone Network
- History of the Computer
- History of the Internet
- The Internet versus its Applications
- Some new Applications
- Implications for the way we live, work and play
- The Internet – a basis for distributed, multi-tier application deployment

# Global Telephone Network

- Telegraph Demonstration - 1804
- Telegraph in use - 1839
- First Transatlantic Telegraph Cable - 1868 (but only two words per minute !)
- Bell Telephone demo - 1876
- Strowger Telephone Exchange - 1888
- First Transatlantic Telephone Cable - 1956
- First Digital Exchange - 1968
- First ISDN specifications - 1984

# Sam Hallas' s Web Site

- History of Telegraphy
- History of Telephony
- BT Museum Memorial Web Site
- Lots of Nice pictures - used by permission
  - <http://www.samhallas.co.uk/>

# Hughes Printing Telegraph

David Edward Hughes, born between Corwen and Bala about 1831. Hughes conducted successful wireless transmission experiments in Great Portland Street London, before Marconi.

[http://en.wikipedia.org/wiki/David\\_Edward\\_Hughes](http://en.wikipedia.org/wiki/David_Edward_Hughes)

Cower-Bell telephone, 1881  
The Post-Office converted its street public telegraph  
into loud-speaking telephones using this instrument. Both the  
transmitter and receiver are in the body of the  
instrument, the sounds being carried to the ears with the  
coiled tubes.

# Computer History - Antikythera mechanism

- Estimated to have been made around 100 BC
- This device is not believed to have been “programmable”.
- It is capable of a very complex set of interrelated computations.

“ This machine has the oldest known complex gear mechanism and is sometimes called the first known analog computer, although the quality of its manufacture suggests that it may have had a number of undiscovered predecessors during the Hellenistic Period.”

[http://en.wikipedia.org/wiki/Antikythera\\_mechanism](http://en.wikipedia.org/wiki/Antikythera_mechanism)

# Computer History - Antikythera mechanism

- **Antikythera Research Project**
  - <http://www.antikythera-mechanism.gr/>
- **Probing the secrets of the Antikythera Mechanism**
  - <http://www.bbc.co.uk/news/science-environment-17989915>
- **Ancient Moon 'computer' revisited**
  - <http://news.bbc.co.uk/1/hi/sci/tech/6191462.stm>

  - <http://www.bbc.co.uk/news/uk-england-london-18448518>
- **Various Antikythera videos on Youtube**
  - <http://www.youtube.com/user/antikythera2012>

# Computer History (2)

- Wilhelm Shickard's
  - Calculating Clock – 1623
- Five Digit adder - 1644
- Babbage Difference Engine - 1812
- Ada Lovelace write programs - mid 18xx
- Harvard ASCC M-1 - 1944
  - Automatic Sequence Controlled Calculator
- Alan Turing / Tommy Flowers “Colossus” - 1943
- ENIAC - 1945/6
  - Electronic Numerical Integrator and Computer
- Manchester SSEM - 1948 (first stored program computer)

# Computer History (3)

- Grace Hopper invents Compiler - 1951
- MainFrames developed - 1950s, 1960s
- MiniComputers - 1970s, 1980s
- Altair Microcomputer - 1975
- Home Computers - 1977
- Spreadsheets (VisiCalc) - 1979
- IBM PC - 1981

# Internet History

- First created during the “Cold War” in September 1969
- Initially University and Government Research Laboratories in the USA
- Decentralised Computer Network - main design aim - no single point of failure

# Internet Evolution

- Now Global
- Network of Networks
- No single organisation controls the Internet
- Co-operative Anarchy
- Like a “global electronic road network”
- Transition of all Internet connected devices to the current mode of operation of the Internet occurred during 1982 and the final change over happened on January 1<sup>st</sup> 1983

# Internet Size

- Now the biggest computer network by far
- More trans-Atlantic Internet traffic than voice telephony
- Reaches almost every country in the world
- growth rate, approximately 10% per month, until 1994 and since its exploded...
- at end of 1995, about 7,000,000 connected hosts (computers and other devices)
- by July 2001, about 125,888,197 connected computers
- by Jan 2002, about 147,344,723 connected computers
- by July 2002, about 162,128,493 connected computers
- According to Nua Internet Surveys 605.60 million million people were “on-line” in Sept 2002

## Internet Domain Survey Host Count

Source: Internet Systems Consortium ([www.isc.org](http://www.isc.org))

“Source: Internet Systems Consortium (<http://www.isc.org/>)”

# Internet Applications

- Supports many different Applications
- Early applications were for file transfer, electronic mail and access to distant shared computers
- Electronic News groups appeared
- More recent applications provide shared access to inter-linked multimedia databases and the ability to transport voice, video etc.
- Now lots of multi-tier, distributed applications appearing

# World Wide Web

- Probably the most important application so far invented [ – now being used as a vehicle to deliver other applications/services]
- Invented by a Briton, Tim Berners-Lee who was working at CERN in Geneva (now Sir – knighted)
- “Interlinked multimedia globally distributed document store”
- Users gain access via a “browser”

# Browsers

- Initially just for the World Wide Web and just for textual information
- next generation handled graphics and now audio, video, animation and more...
- Also, browsers now provide access to electronic mail and newsgroups via a single piece of software in addition to Web access
- Live downloaded programs (e.g. Java Applets, ActiveX, Javascript etc )

# Finding Information

- one of the biggest problems that remains
- search engines (google, bing, ask, duckduckgo, ...)
- directory services ( [www.yellowpages.com](http://www.yellowpages.com), [www.yell.com](http://www.yell.com), ... )
- well known sites ( [bbc.co.uk/news](http://bbc.co.uk/news), <http://www.gardenersworld.com>, [sourceforge.net](http://sourceforge.net) )

# Total Web Sites Across All Domains August 1995 – July 2012

Source: Netcraft <http://www.netcraft.com/>

# Products in use as World Wide Web Servers Aug 1995 -> July 2012

Source: Netcraft <http://www.netcraft.com/>

## Totals for Active Sites Across All Domains June 2000 - July 2012

Source: Netcraft <http://www.netcraft.com/>

# Market Share for Top Servers Across the Million Busiest Sites

## September 2008 - July 2012

Source: Netcraft <http://www.netcraft.com/>

# Netcraft Statistics

- After July 2012 they change to “live” images that you can explore.
- <http://news.netcraft.com/archives/category/web-server-survey/>

# Undersea Cables

- Undersea fibre cables really important
- Cable faults can cause major problems
- Asia telecoms await quake repairs (Jan 2007)
  - <http://news.bbc.co.uk/1/hi/world/asia-pacific/6241299.stm>
- Disruption after web cables cut (Jan 2008)
  - <http://news.bbc.co.uk/1/hi/business/7222411.stm>
- New cable cut compounds net woes (Feb 2008)
  - <http://news.bbc.co.uk/1/hi/technology/7222536.stm>
- Fiber-Optic Link Around the Globe – operated by
  - [Global Cloud Xchange](#)
- Submarine communications cable (Wikipedia)
  - [http://en.wikipedia.org/wiki/Submarine\\_communications\\_cable](http://en.wikipedia.org/wiki/Submarine_communications_cable)
- List of international submarine communications cables (Wikipedia)
  - [http://en.wikipedia.org/wiki/List\\_of\\_international\\_submarine\\_communications\\_cables](http://en.wikipedia.org/wiki/List_of_international_submarine_communications_cables)

# Internet for Business

- Locate their potential suppliers
- Allow customers to locate them
- General marketing and publicity
- Raise the profile of your area for Tourism
- Raise the profile of your area as a substantial shopping centre
- Buy and sell over the Net

# Electronic Trading and Security

- Now a well established reality
- At least four basic approaches
  - On-line credit/debit card transactions
  - Trusted third party (e.g. PayPal)
  - Direct bank account transfers
  - Electronic Wallet
- On-line banking now common
- All depends on secure transactions

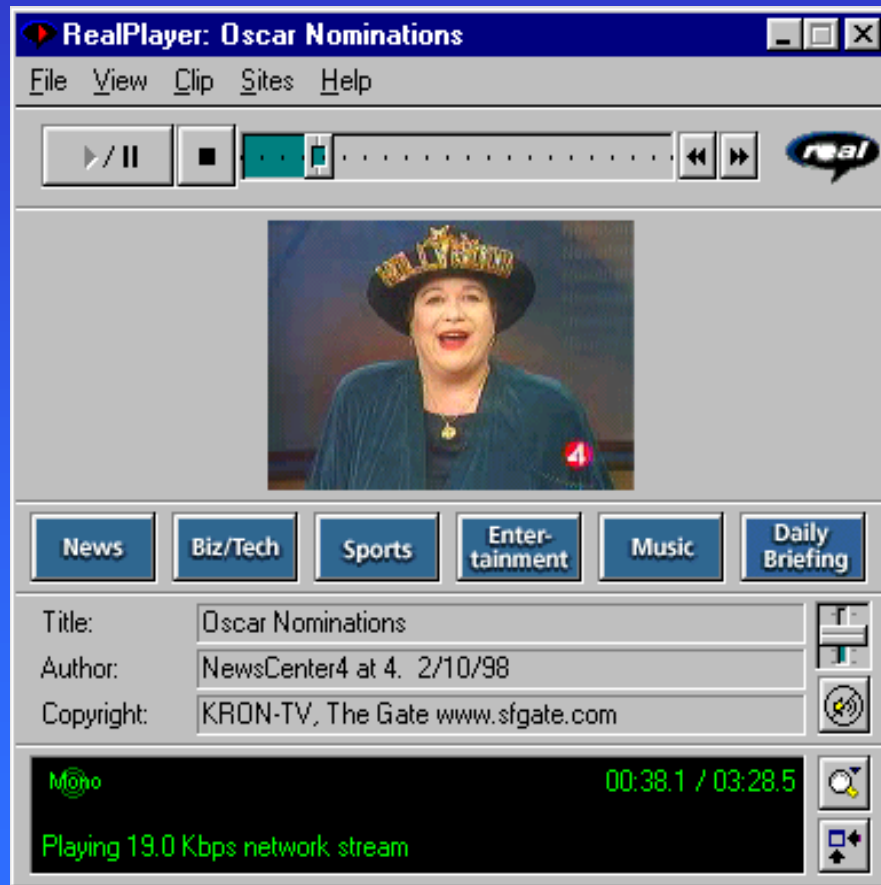

# “More than just a web page”

## Applications

- On Demand Access to recorded audio and video
- Live Audio and Video - Rock Concerts and distant Conferences
- Severe Tire Damage
  - [http://en.wikipedia.org/wiki/Severe\\_Tire\\_Damage\\_\(band\)](http://en.wikipedia.org/wiki/Severe_Tire_Damage_(band))
- Caduseus live at the Vortex
  - <http://news.bbc.co.uk/1/hi/wales/mid/4932034.stm>
  - <http://www.aber.ac.uk/~dcswww/Telematics/MICE/vortex.html>
- Interactive Desktop Conferencing with Video, Audio, WhiteBoards, Shared Editors and so on.....
- Now lots of multi-tier, distributed applications appearing

# Early On Demand Video / Audio

# Internet TV

“Westminster Select Committee  
Thursday 19th March 1998”.

John Birt (BBC Boss) says...

“We are not far off the Internet emerging as an on-demand  
television service”

February 2006

BBC launch Multicast Trial Access to TV channels

<http://www.bbc.co.uk/multicast/>

2016

BBC3 TV Channel Goes on-line only.

# Social Media / Social Profiles

Twitter – short messages only “tweets” (120 chars)

Facebook – timelines (was “walls”), pages, groups

LinkedIn – academic/business profiles, “connections”

Pinterest – image based “interests pinned on boards”

Tumblr – “micro blogging platform”

Flickr – images and photographs

Instagram – mostly photo and short video sharing

...

Auto-tweeting .....

[www.buffer.com](http://www.buffer.com) - prepare tweets/posts in advance

# Cloud Computing / Services

- Internet based storage
  - Dropbox
  - Google Drive / Googles Doc
  - Microsoft Skydrive – Now OneDrive –TWO different products!
- Internet based computation
  - Beowulf Clusters
  - Google's Compute Engine
  - Amazon Elastic Compute Cloud (Amazon EC2)
- Internet located email
  - Hotmail
  - Outlook 365
- Internet based “Office” products
  - Microsoft's Office 365's “Office on the Cloud”

# J2EE Environment: Multi-tier support
